SUMMARY

Python/Django Backend Developer who builds secure, production-minded REST APIs, licensing backends, and payment-integrated web applications with Django REST Framework and PostgreSQL. Proficient in JWT authentication, role-based access control, and concurrency-safe database design. Backed by hands-on QA and API testing experience that drives reliable, well-documented, and maintainable code.

TECHNICAL SKILLS

Languages: Python, JavaScript
Backend: Django, Django REST Framework, REST APIs
Database: PostgreSQL, SQLite, Django ORM
Authentication & Security: JWT, Authentication, Authorization, Role-Based Access Control
Frontend: React, HTML, CSS, JavaScript
API & Testing: DRF Spectacular, Postman
Tools: Docker, Git, GitHub, Render, Vercel

PROFESSIONAL EXPERIENCE

Python Developer Intern — Febno Technologies | Sep 2026 – Oct 2026 | Malappuram, Kerala

- Executed API testing on Amazon APIs using Postman, validating endpoints, request parameters, authorization headers, and response payloads to ensure integration reliability.
- Tested web application features across client projects to identify functional issues and unexpected behavior, ensuring reliable application performance.
- Audited websites for broken links, incorrect redirects, wrong HTTP status codes, and on-page issues as part of structured QA testing.
- Developed a Django REST Framework backend for time-based premium licensing with offline license verification.
- Implemented signed license tokens using ES256 cryptographic signatures, with device activation limits, expiration, and revocation.
- Designed PostgreSQL models for licenses, devices, idempotency records, and append-only audit events to ensure traceability and safe request retries.
- Implemented concurrency-safe device activation using database transactions to prevent race conditions and enforce activation limits.

PROJECTS

E-Commerce Platform — Django REST Framework

- Built a secure REST API backend with Django REST Framework and PostgreSQL, using custom ORM-based database management for catalog and order data.
- Implemented JWT authentication with role-based authorization to control access across user and admin operations.
- Integrated multi-gateway payments (Razorpay, Stripe, and Cash on Delivery) into a unified checkout flow.
- Documented APIs with DRF Spectacular (OpenAPI) and tested every endpoint with Postman to support smooth frontend integration.

AI Study Assistant — Document-Grounded Learning Platform

- Developed a Django REST Framework application with JWT authentication, supporting document uploads, AI chat, summaries, quizzes, and flashcards.
- Integrated a RAG pipeline: document ingestion (PDF/DOCX/TXT/Markdown) > overlapping text chunking > Nomic Embed Text embeddings > ChromaDB vector database > retrieval.
- Connected Ollama (Llama 3) running locally to generate context-grounded responses from document context while maintaining complete data privacy.
- Added a keyword-based retrieval fallback so the assistant stays reliable when vector search returns no match.

EDUCATION

- **Python Django Full Stack** — TechnoDot Academy of R&D&I | Jan 2026 – Aug 2026
- **BA English** — University of Calicut | 2022 – 2025
